Create your DiBuCard

A simple, illustrated guide for business and personal cards.

From your first account to a card you can share.

No coding required. Start with your details, add your images and publish when you are ready.

1. **Choose your plan**
2. **Create an account and pay if needed**
3. **Add your text and media**
4. **Style, check and publish**

Have these ready

Your email, a password, a main image or logo, a profile photo, a short introduction and any website or social links.

How to use this guide
Follow pages 2-7 in order. Use the checklist on page 8 before sharing your card. Screens below are simplified illustrations; spacing and translated labels may vary.

Example card and images are used only to demonstrate the editor.

1. Choose a plan and sign up

Go to dibucard.com and open Pricing. Compare the plan features before choosing.

Plan	Cards	Gallery photos*	Video slots*
Free	1	1	0
Deluxe	3	3	2
Premium	12	4	3
DiBu Net	25	6	4
EB	4	0	0

* Media limits are per card. The main photo/logo and round photo are separate from gallery photos. A video logo uses one video slot. EB is an emergency-only plan.

1. **Create your account**

   Choose Sign up. Enter your name, email and a password. Select your plan and follow the registration prompts.

2. **Complete payment for a paid plan**

   If payment is not offered during signup, open Studio and My subscription. Select your paid plan and follow the payment button to Stripe Checkout.

3. **Confirm before you pay**

   Check the plan, currency, monthly price and renewal terms shown at checkout. Enter your payment details and complete any bank verification.

4. **Return to Studio**

   After checkout, check My subscription and the plan shown above the editor. A Free account does not require payment.

Payment not confirmed?

Do not pay again immediately. Check My subscription and payment history first. Contact support if the plan remains incorrect.

2. Add your card details

Sign in, open Studio and choose New card - or select an existing card under MY CARDS.

1 Choose the category and language

Select Business card, Personal card or an eligible EB card. Set Main card language to match the text you write so catalog filters can find it.

2 Write a clear introduction

Add your name, contact details and address. Use a short description for your main message and the long description for your story, products or services.

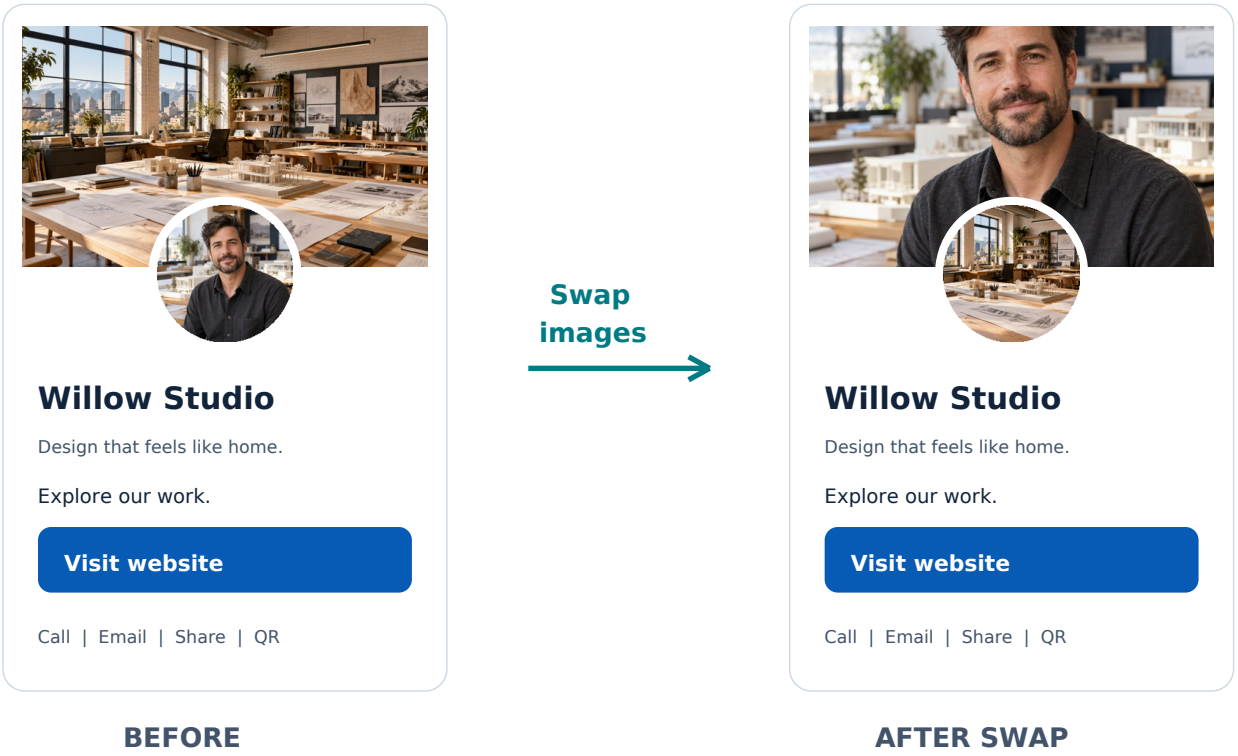

3 Add useful links

Enter your full website address, including https://. Choose clear Button text, such as Visit website. Add supported social links with their labels.

Optional AI help: If you use the AI card creator, review all generated details, add your own media and correct anything inaccurate before publishing.

3. Add and swap your images

Open Media. Your large main image and your small round photo are two separate uploads.

BEFORE

AFTER SWAP

1. **Upload the large photo or logo**

   Under Card logo - photo or video, choose Logo photo and select a JPG, PNG or WebP file. Wait for its upload preview.

2. **Upload your round profile photo**

   Use Small round profile photo. Keep the face or logo near the centre because the image is cropped to a circle.

3. **Use Swap images**

   Click Swap images to exchange these two pictures. Check the large area and the round crop in LIVE PREVIEW. Click it again to switch them back.

Save the result

Click Save draft for a new unpublished card, or Save changes for a live card. Swap images is unavailable when the main logo is a video; use a photo first.

4. Add gallery photos and videos

Stay in Media. The available upload slots depend on your plan.

Photo 1

Add a useful caption

Photo 2

Add a useful caption

Photo 3

Add a useful caption

A simple gallery: show your place, your work and what visitors can expect.

1 Fill a gallery slot

Under Gallery photos, use Add photo 1, Add photo 2 and so on. Add a short caption and, if useful, a Purchase or website link.

2 Replace or remove a photo

Use Replace photo in the same slot to upload another image. Or choose Remove photo, then add a new one. Save your changes afterwards.

3 Upload a video

Deluxe, Premium and DiBu Net include video slots. Use Gallery videos to upload MP4 or WebM files under 75 MB. Check playback in the preview.

4 Add a video logo or YouTube clip

Premium and DiBu Net support a logo clip up to 60 seconds, under 75 MB. It uses one video slot. Deluxe and higher business plans also have a YouTube video ID field.

YouTube: enter the ID, not the whole address

Example: youtube.com/watch?v=AbCdEfGhI12 → enter AbCdEfGhI12. The ID must contain exactly 11 characters. Use your own clip or one you may share.

5. Choose your style and background

Open Style. Use a clean design that makes your words and buttons easy to read.

electric

citrus

ocean

rose

1. **Pick a theme**

   Choose one of the available Card theme buttons. Free and EB use the electric theme. Deluxe, Premium and DiBu Net offer additional themes.

2. **Upload your own background**

   With Deluxe, Premium or DiBu Net, find Custom background and choose Upload background photo. Use JPG, PNG or WebP under 15 MB.

3. **Check the result**

   Keep busy parts of the picture away from text. Make sure headings, captions and buttons remain readable. Use Remove background to return to the theme background.

4. **Explore your other plan options**

   Premium and DiBu Net include Typography, Markets and eligible emergency tools. DiBu Net also includes Daily motivation. Horoscope is available in all plans.

Some extra settings need a saved card first

If an option asks for a card ID or an existing card, save your draft, reopen the card and configure that option. Review any separate Save button in that section.

Keep private information private. Your published card is public. Only put contact information, photos and descriptions on it that you want visitors to see.

6. Save, publish and share

Preview changes are not automatically the same as a saved public card.

Save draft	Publish	Save changes
New card, still private. Keep working later.	Make your card public and save updates.	Update a card that is already live.

Wait for the saved confirmation before leaving the editor.

1 Check before publishing

Review the spelling, phone number, email, website, image crops, captions and videos. Check the card on a narrow phone screen too.

2 Publish your card

Click Publish and wait for confirmation. Use Open saved card to see the actual saved version. A successful publication gives your card a public link and QR code.

3 Share the live version

Open the public card. Use Share, copy its link or let someone scan its QR code. Test the QR with another phone before printing it.

4 Find and update your card later

Look for your card in DiBu Mall or iPod Mall using its title and correct language filter. It may be on a later page. Return to Studio, select the card and use Save changes.

Need to take a card offline?

Use Unpublish this card now in the editor. This stops public display; it does not by itself cancel your subscription.

Your final check and quick help

Keep this page handy when creating or updating your next card.

- [ ] The correct plan is active in My subscription.
- [ ] The card name, category and language are correct.
- [ ] The main image and round photo are in the right places.
- [ ] Captions, descriptions and buttons are easy to read.
- [ ] Phone, email, website and video links work.
- [ ] The card has been saved and published successfully.
- [ ] The public link and QR code open the right card.

If something does not look right

Photo missing? Wait for the upload, check the preview and save again. Try a standard JPG, PNG or WebP file.

Old version showing? Check the save confirmation, open Open saved card and refresh the public page. Make sure you edited the right card.

Feature unavailable? Check your effective plan and available media slots. A video logo uses one slot.

Card not in the catalog? Confirm it is Live, search its exact title and check the language filter. Popular cards appear first.

Monthly subscriptions and plan changes

Paid plans renew monthly. Plan changes take effect on the renewal date. If a renewal payment fails, cards remain public and editable for up to 30 days; access ends if payment is not received. Voluntary cancellation ends access at the end of the paid period.

Need help? Email dibucard@usa.com with your card link and a description of the problem. Never send your password or payment card details.
